species has a dark iron-grey pelage, and the late Mr. Consul Swinhoe described It jts very Goat-like In aspect

Oaprcvlas.—The lios Deer has fairly complex antlers. It is a small Doer and lias spotted young. The common IKoe jDeer^ *C. capraefi,* is a native of this country. It is the smallest of our Deer, and its antlers only have three tines in stags of the third year. It is a singular fact about this Deer that though the pair-ID3 season is in -July and August, the young are not born until the following May or Jim':;, a. period Vtliicli does not represent that of gestation. The germ remains dormant for some time before (level jpiug,

The Muntjucs, *Ccrcvlvs,* form a distinct generic type confined to the Indian and the South-Eastern Paluearetic region. They
